

88% Synthetic Industrial Chain Lube

Description:

Our 88% Synthetic Industrial Chain/Cable/Gear Lube is the finest chain lube on the market! It provides protection for chains, industrial tow chains, oven chains, cables, gears, gear boxes, mobile metal rails and other applications beyond belief. It is light enough to work its way into your rollers, but is heavy enough to cling to your fast-moving parts.

Best of Both Worlds

Our formula is a "hybrid" blended from lubrication oil and solid, lubricating grease. It has the mobility of oil and, yet, the splatter and sling off resistance of grease. Its consistency is that of a thick fluid. However, it is able to penetrate like fine machine oil, fortified with lubrication compounds and select additives to assist in reducing energy consumption friction and wear, even under the most severe conditions.

Benefits

Using our 88% Synthetic Industrial High Temp Chain Lube will reduce energy consumption and chain stretching. It is also suitable for cable lubrication. It will creep all through the cable to provide exceptional wear and corrosion resistance. The lubricity agent in our 88% Synthetic Industrial high temp Chain/Cable/Gear Lube will produce films on the metal that will prevent moisture from attacking the surface. It prevents rust and corrosion. It will reduce fatigue wear associated with moisture exposure. Our Lubricity films reduce the operating temperatures of the parts and reduce the energy consumption of a chain drive. In addition, it will reduce the noise and vibration associated with chain operation. Lubricity will remain on the metal long after the bulk oil film is dispersed. This Lubricity agent is the most remarkable lubrication chemical we have ever seen!

Quality Raw Materials

We have extensive experience with lubricating chains on ovens, RVs, industrial equipment and farm equipment. We are aware that good customer success is related to high quality raw materials. We have used only the best base stocks and additives to formulate this product. We offer exceptional Quality Control over manufacturing. **We will risk that you cannot buy a higher quality industrial chain lube from any other supplier.** Trust Steward Enterprise Inc. for high quality lubricants in all applications.

Features

- 88% synthetic base stocks
- Tacky and stringy (will not fling off the chain)
- Provides lubricity protection
- Provides shock load & anti-wear protection
- Provides extreme pressure protection
- Covers ALL the elements of lubrication
- Reduces chain stretching
- Reduces corrosion on chains and sprockets
- Reduces oil consumption on chain drives
- Reduces energy loss through the chain drive
- Non-corrosive to brass and bronze(yellow metals)
- Conditions oil seals
- Chemical resistant (E-coat and Paint lines)

Typical Test Data

SAE Grade - 250
ISO Grade - 680
Viscosity at 100 °C, cSt. - 45.7
Specific Gravity - 0.8605
Pounds per Gallon - 7.17
Flash Point, COC, -288°C
